

### **fm**Label

#### Automatic Text Insertion for AutoCAD

*fmLabel* is a text insertion tool with flexible prefix, suffix, and incrementing value capabilities that transform text insertion into a fast and simple process within AutoCAD.

- Insert text incrementally into the drawing by a user defined value.
- Prefix capability allows users to assign a prefix to the numbers being inserted.
- Suffix capability expands the flexibility and speed of text insertion by allowing entry of either a common suffix or an incremental suffix to the numbers being inserted

#### Example:

A starting number of 100 and an increment value of 2 will produce 100, 102, 104, etc.

Add a prefix such as RM- and the results will be **RM-100, RM-102, RM-104**, etc.

Add a common suffix such as "A" and the results will be **RM-100A, RM-102A, RM-104A**, etc.

Increment the suffix by a user defineable value and the main number becomes constant as the suffix automatically increments by the value entered. Increment suffix by 1, would produce **RM-100A, RM-100B, RM-100C**, etc.

Increment suffix by 2, would produce **RM-100A, RM-100C, RM-100E**, etc.

### **fm**Audit

#### Space Auditing Made Easy

*fmAudit* is AutoCAD audit tool designed to check polylines and their associated text within the drawing for potential problems that could cause errors when the AutoCAD drawing is imported into a CAFM system. Automatically check the drawing for:

- Unclosed Polylines
- Polylines with no room label, or with multiple room labels
- Duplicate room labels within the same drawing

*fmAudit* will highlight polyline and text errors so that the AutoCAD user is able to identify and correct the problems before the CAFM drawing import begins, increasing the speed and accuracy of the CAFM system implementation.

*fmAudit* also tags polylines with their associated room number and square footage. Tag polylines as Space Net, Space Gross, Floor, Zone and more. Publish the drawing to DWF to allow users to mouse over the drawing spaces to view the associated space square footage.

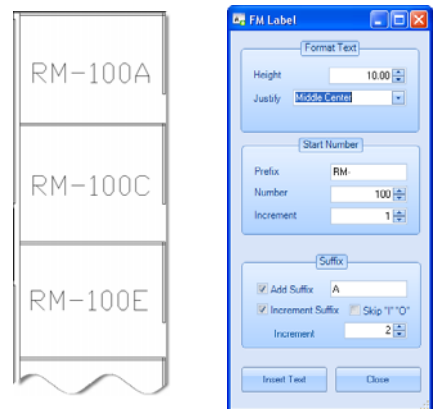

## 100% Productivity Increase...

### AutoCAD Auto Numbering

- Incremental Numbering
- Prefixing
- Incremental Sufficing

Fast, always accurate, automatic AutoCAD text insertion. Number an entire drawing in minutes, even the cubicles!

#### Incremental sufficing for cubicles!

### AutoCAD Auditing for CAFM

- Check Unclosed Polylines
- Check Polylines without Text
- Check Duplicate Space Text

Tag polylines with space number and square footage and then publish to DWF. Mouse over DWF file to view associated Space Net and Space Gross square footage.
